

PULLEMLA PUNEETH KUMAR

SQL / Database-Focused Developer

puneethpullemla@gmail.com | +91 9949553362 | [LinkedIn](#) | [GitHub](#)

SUMMARY

Developer (fresher, 2026) with hands-on experience in SQL and relational database design. Built a skill-matching engine using SQL joins, aggregation, and subqueries to score employee-project fit, and an enterprise workforce management platform with a relational schema, JWT auth, and REST APIs. Comfortable writing backend logic with FastAPI, SQLAlchemy, and MySQL/PostgreSQL.

TECHNICAL SKILLS

- **Languages:** Python, SQL
- **Databases & SQL:** MySQL, PostgreSQL, SQL (Joins, Subqueries, Aggregation, GROUP BY/HAVING, SQL Views), Database Normalization, Composite Keys, Foreign Key Constraints, Indexing, Query Optimization
- **Backend:** FastAPI, SQLAlchemy, Alembic, Pydantic, REST APIs
- **Frontend:** React, Charts & Dashboards, CRUD Workflows
- **Security:** JWT Authentication, RBAC
- **Deployment:** AWS EC2, GitHub Actions (CI/CD), Git

PROJECTS

Employee Skill & Project Allocation Tracker

- Designed a normalized MySQL database (7 tables) modeling many-to-many relationships between employees, skills, and projects, using composite keys, foreign key constraints, and indexes on high-query columns.
- Built a skill-matching engine that scores employee-project fit using SQL joins, aggregation, and subqueries, factoring in proficiency, availability, and current allocation.
- Developed 20+ REST APIs with FastAPI and Pydantic validation, backed by SQL views and transaction-safe assignment logic to prevent over-allocation.
- Implemented reporting dashboards (utilization, skill gaps, department distribution) using GROUP BY/HAVING aggregations, and a React frontend with charts, filters, and CRUD workflows.

StaffOS — Enterprise Workforce Management Platform

- Designed a relational schema in PostgreSQL using SQLAlchemy ORM and Alembic migrations, backing an enterprise workforce management platform.
- Built 20+ REST APIs in FastAPI with JWT authentication and RBAC, enforcing role-based query access at the database layer.
- Wrote optimized SQL queries and indexes to support high-frequency lookups across employee, project, and permission tables.
- Deployed on AWS EC2, with GitHub Actions CI/CD

CERTIFICATIONS

- **AWS Solutions Architecture Job Simulation** — Amazon Web Services
- **Introduction to Data Analytics** — Coursera

EDUCATION

B.Tech — Computer Science & Engineering (AI & ML)

Malla Reddy University, Hyderabad | CGPA: **8.41**

2026
