

PULLEMLA PUNEETH KUMAR

Java Full Stack Developer

puneethpullemla@gmail.com | +91 9949553362 | [LinkedIn](#) | [GitHub](#)

SUMMARY

Java Full Stack Developer (fresher, 2026) with hands-on experience building secure, backend systems using Spring Boot, Spring Security, and MySQL. Built a full-stack file-sharing platform with JWT authentication, BCrypt password hashing, ownership-based authorization, and token-based secure link generation, backed by a relational schema and REST APIs with server-side expiry/revocation enforcement. Also built a Java CLI tool applying strong OOP design. Stack-based undo, and clear separation of responsibilities across 8 classes. Comfortable across the Java ecosystem: Spring Web, JDBC, React, and secure REST API design.

TECHNICAL SKILLS

- **Languages:** Java, SQL, Python
- **Backend:** Spring Boot, Spring Security, Spring Web, JDBC, REST APIs, JWT Authentication, BCrypt
- **Database:** MySQL, Relational Schema Design, Query Optimization
- **Frontend:** React, TypeScript
- **Core Java:** OOP, Collections, Streams, java.nio.file, Exception Handling
- **Security & Tooling:** SecureRandom, SHA-256 Hashing, Authorization, Git..

PROJECTS

VaultLink — Secure Temporary File Sharing Platform

- Built a full-stack file-sharing platform enabling users to upload files and generate time-limited, revocable download links with expiry-based access control.
- Implemented JWT-based authentication and BCrypt password hashing, with ownership-based authorization restricting file access to the owning user.
- Designed a relational schema (MySQL) modeling Users, Files, and Share Links with token-based access, using SecureRandom for cryptographically secure link generation.
- Built REST APIs for upload, sharing, download, and link revocation, with expiry/revocation checks enforced server-side before serving files.
- Validated file uploads by extension, size, and content type to prevent unsafe uploads.

Smart File Organizer

- Built a Java CLI tool that scans a directory, classifies files into categories using externally configurable rules (.properties file), and auto-organizes them into folders.
- Implemented content hashing to detect duplicate files by content (not just filename), large-file flagging, real-time file statistics, and a Stack-based undo system to reverse the last organize operation.
- Designed with clear separation of responsibilities across 8 classes (scanner, classifier, mover, duplicate detector, stats, operation history).

CERTIFICATIONS

- **Programming in Java — NPTEL**
- **AWS Solutions Architecture Job Simulation — Amazon Web Services**

EDUCATION

B.Tech — Computer Science & Engineering

Expected: 2026

Malla Reddy University, Hyderabad | CGPA: **8.41**
